

DO YOU NEED HELP WITH YOUR GLOBAL GAP CERTIFICATE REQUIREMENTS?

PGSL can help you....

Global Gap is a traceable, accountable system from crop to customer for the production of vegetables, fruit and many other fresh produce. The system was developed to ensure you, as our food suppliers, are committed to producing produce in a safe and sustainable way.

Many of you already have the systems in place required to achieve this annual certificate, however, lack the time required for the paperwork or just need guidance on improvements or implementing policies and procedures.

PGSL is now offering a made-to-measure customised programme incorporating the modules necessary to achieve your Global Gap certificate.

We can implement or overview your current Global Gap procedures and apply improvements in the following areas:

- H&S system for your farm covering worker's health, safety and welfare
- Farm spraying/handling and processing policies and implementing procedures
- Appropriate documentation references necessary for the audit process
- Farm visits offering visual recommendations to keep your farm running in a safe and sustainable way
